Size of all databases on one SQL Server

Here is a script that I created to get the size of all of the databases on one SQL Server.

Generally I stay away from temp tables, especially global temp tables, but I didn't see a good way to do this without them.

```
CREATE TABLE ##allidatabasesizes
  (
    dbname    VARCHAR(1024)
    type_desc VARCHAR(1024)
    name      VARCHAR(1024)
    size      INTEGER
  )
EXECUTE Sp_msforeachdb
'INSERT INTO ##AllDatabaseSizes
SELECT db_name() as dbname, type_desc,
name, size FROM [?].sys.database_files'
SELECT *
FROM  ##allidatabasesizes
DROP TABLE ##allidatabasesizes
```
