

## Database Size report added to SQL Health Reports

In preparation for a SQL Saturday presentation I have created another report to add to the FREE SQL Server Health reports project.

The [Database Size Report](#) has been added to the [SQL Health Reports](#). The [Database Size Report](#) is the 6th report to be added to the Database Health Reports package.

The Database Health reports package is a FREE collection of several reports that I have created to monitor and maintain the health of your SQL server.

With this report you can quickly assess the size of your databases and the logs to determine which may be growing faster than you expect.
