5 Days Until Beta 3 of the Database Health Reports

5 days until Beta 3 of the Database Health Reports. Coming soon, and this one is going to be cool. Although Beta1 and Beta2 had a number of great monitoring features Beta 3 takes a whole new approach. All of the previous features in the database Health Reports report on the current status at the time you run the program. With the Beta 3 there will be Historic Wait Monitoring which keeps track of your SQL Server when you are not watching it. Then when you realize that was a problem you can go back and look at what may have been causing that problem.

Beta 3 will have Historic Wait Monitoring. Here is an example screen shot of the Historic Wait Monitoring. Beta 3 of the Database Health Reports will be available between 11/15/2012 and 11/20/2012.

Here is a preview of the Query Waits Advisor, which will be available soon in Beta 3.
