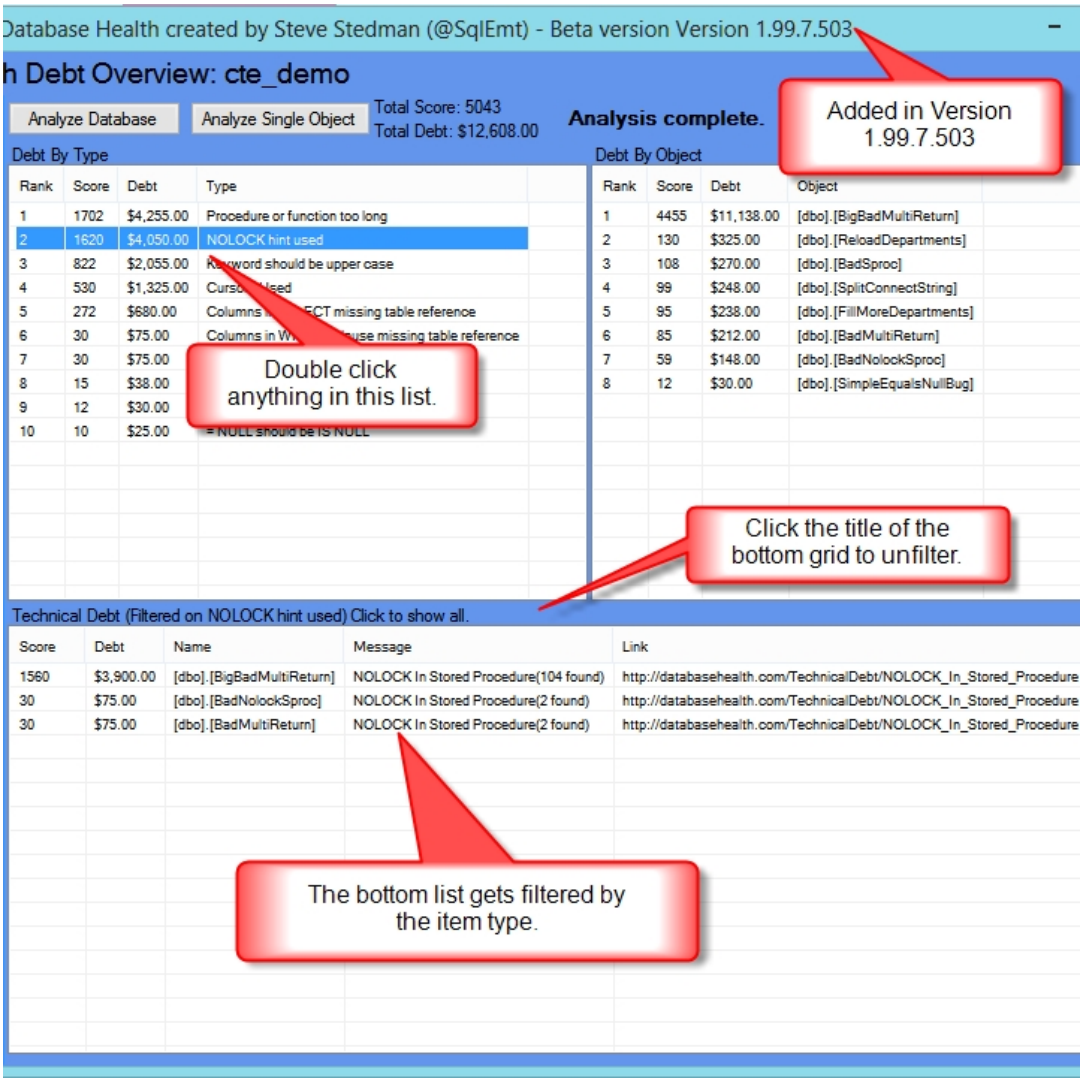
Beta 7+ Filter Technical Debt by Debt Type

One of the ideas behind Scrum software development is the idea of "Release early, Release Often and Get Customer Feedback."

After the release of Beta 7 of the Database Health Reports earlier this week I received an email with a really great suggestion that I just had to implement. The suggestion was to be able to **click on the debt type and get the list of items with that debt**.



If you are running Database Health Reports with a version (as shown in the title bar) less than 1.99.7.**503** and you want this new feature, just go to the download page and download the latest

version.
