Released Today - Database Health Monitor - November 2018

Today I released the November 2018 (version 2.6.6) release of Database Health Monitor.

Version 2.6.6 Release Notes

Version 2.6.6 is the November 2018 Release of Database Health Monitor

New Features in 2.6.6

- Added a check in the Quick Scan report for databases running on an older compatibility level.
- Added a check to the Quick Scan report for serializable transactions.
- Added a check to the Quick Scan report for Instant File Initialization.
- Added a check to the Quick Scan report for more than once instance installed.
- Preliminary SQL Server 2019 compatibility testing.

Bug Fixes in 2.6.6

- Suspect pages report button text didn’t fit on some resolutions. Renamed to be just “Suspect Pages”.

Database Health Monitor has been in the works since 2011, take a look at the history page to see the details over time.
