

## 5 Days Until Beta 3 of the Database Health Reports

5 days until Beta 3 of the Database Health Reports. Coming soon, and this one is going to be cool. Although Beta1 and Beta2 had a number of great monitoring features Beta 3 takes a whole new approach. All of the previous features in the database Health Reports report on the current status at the time you run the program. With the Beta 3 there will be [Historic Wait Monitoring](#) which keeps track of your SQL Server when you are not watching it. Then when you realize that was a problem you can go back and look at what may have been causing that problem.

Beta 3 will have [Historic Wait Monitoring](#). Here is an example screen shot of the [Historic Wait Monitoring](#). Beta 3 of the [Database Health Reports](#) will be available between 11/15/2012 and 11/20/2012.

Here is a preview of the Query Waits Advisor, which will be available soon in [Beta 3](#).
