

Database Health Version 3.1 So Soon After Beta 3

Today I release [Beta 3.1 of the Database Health Reports](#).

Immediately after the release of Beta 3, there were 3 bugs reported that were very quick to fix. I was able to get these fixed, along with one other bug fix, once they were all tested, I launched [Beta 3.1 of the Database Health Reports](#).

For anyone who downloaded Beta 3 and set up the [historic waits monitoring](#): What you set up will still be active if you upgrade to Beta 3.1, just upgrade to Beta 3.1, and reconnect to it by clicking on the historic waits panel and providing the login credentials.

I hope everyone enjoys this update.
