Help With SQL Queries

A few times each week I get questions from people wanting help with a query. If the solution is something simple that I can see right away without spending much time then I will suggest the solution. Frequently it turns out that people who are asking for help with a query have some really complex queries, where it is going to take more than a couple minutes to help figure out the problem, or to understand their dataset.

I always want to help, but with only so many hours in the day I don't have the time answer all of these vquery questions for free.

How I can help? At Stedman Solutions we have a SQL Server Mentoring package, it is almost what you could call a micro consulting offering. There is no long term commitment, you buy in to 4 hours of SQL consulting help, that doesn't expire as long as you are occasionally asking for help. The SQL Server Mentoring is a training / consulting option for those who just need a little help or direction. This is a cost-effective approach for those who need just a little help.

Limited Time Offer: For a limited time, through August 1st, 2020 we are offering the SQL Mentoring with a 2 hour minimum purchase.

Here is how the SQL Server mentoring works with Stedman Solutions, LLC.

- Contact Steve to get started.
- Establish a signed agreement and prepaid balance for a minimum of 4 hours.
- Most responses are handled within 8 hours. Most will be less.
- When you have something that you need help with just send an email, and Steve Stedman will work on helping with your request. Your request can be on just about any SQL Server administration, programming, or performance tuning.
- Depending on the nature of your request, an email follow may take care of it, other times it may take a remote session with something like Zoom, Teams or Webex.
- You pay for only the time spent answering your request, with a 20 minute minimum time

block.
- Prepaid time doesn't expire.

You can use the SQL Server Mentoring service for help with anything that the Stedman Solutions team knows about from writing SQL queries, to finding deadlocks, to help with creating reports, or troubleshooting a server issue.

Get started today by contacting Stedman Solutions through the free 30 minute consultation form.

At Stedman Solutions, we can help!
