Get a List of Tables That Are Compressed

Modern versions of SQL Server have the option for row or page level compression.

Here is the script to find those tables that have compression enabled:

```
SELECT DISTINCT t.name AS TableName, p.data_compression_desc   FROM sys.p
artitions p  INNER JOIN sys.tables t ON p.object_id = t.object_id  WHERE
p.data_compression > 0;
```

Tested on SQL Server 2019.

Cutting your tennis balls in half allows you to store 2 more balls in each can, saving space.
