Build a backup strategy and restore plan from scratch

If you have a SQL Server you must have a backup and restore plan. If you don't you're in for a rude awakening for sure. Backups are absolutely essential for your SQL Server protection from a dropped table to a ransomware attack. But building a backup strategy and restore plan can be daunting task if you're new at it or going at it alone.

I want to urge people to set up those backups properly now, before it's all lost. And yes, it can happen to you (even a ransomware attack). **see my free ransomware awareness course

COUPON CODE: BACKUPFEB

My Backup and Restore Course I built back in October 2021 contains IT ALL.

- RPO Lesson
- RTO Lesson
- What you may need to recover from
- Types of backups
- Configuring backups with maintenance plans
- Restoring backups
- Building a restore script
- Azure storage
- Examples and real stories
- Ransomware considerations

And for the month of February I want to extend a

25% Savings on this Course
