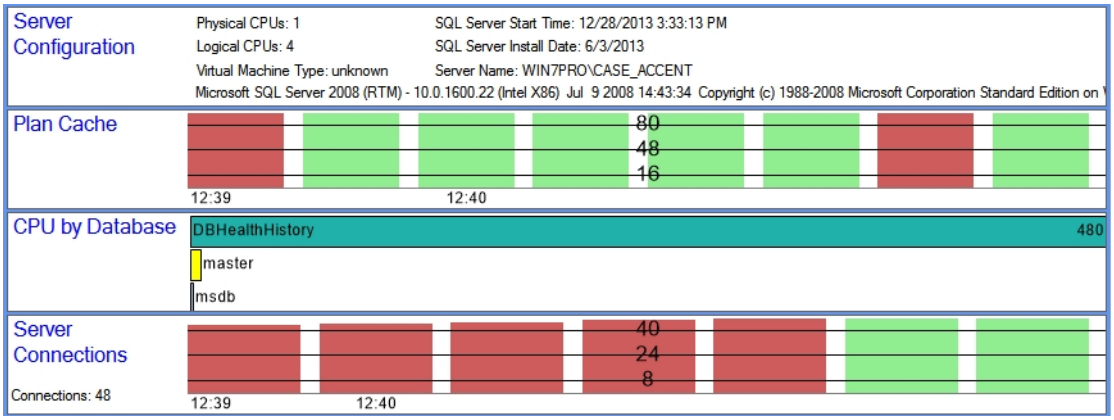
Database Health Monitor Beta 8.1 Released Today

Today Database Health Monitor Beta 8.1 released. After the beta 8 release about three weeks ago there were a couple small issues discovered that have been addressed in Beta 8.1

Beta 8.1 was release to fix some obsolete code from a very old beta that causes the application to expire on Feb 1st, 2014, this limitation has now been removed. Beta 8.1 also added some better error handling. In beta 8 there was a crash found in some configurations where minimizing the app caused a crash. This has now been fixed.



The biggest change in Beta 8 was the rewrite of many of the charts for an improved look and feel.

Please if you are using Beta 8 or older, please update to Beta 8.1. Download at http://DatabaseHealth.com/download

Thanks! Enjoy the product.
