Weekly SQL Training - OUTPUT Clause and Derived Tables

The free SQL Server Queries weekly training is being presented by Steve Stedman and Aaron Buma.

The name of the presentation started out as "**OUTPUT Clause and Derived Tables**", however it evolved into "**OUTPUT Clause Correlated Subqueries and Subquery Extensions**" as we got further into it. Last week we covered some of the basics of Derived Tables or Subqueries, today we will go into more detail on Correlated Subqueries and Subquery Extensions.

Here is the presentation at SlideShare:

You can download the slides and sample code here:
