Backup Set Report added to FREE Server Health Reports

In preparation for an upcoming SQL Saturday presentation I have created another report to add to the FREE SQL Server Health reports project.

This report has been replaced with the Backup Report in the Database Health Project.

The Backup Set Report has been added to the SQL Health Reports. The Backup Set Report is the 7th report to be added to the Database Health Reports package.

The Database Health reports package is a FREE collection of several reports that I have created to monitor and maintain the health of your SQL server.

With this report you can quickly check out the sizes and growth of the databases with the 10 largest backups.

Download it and enjoy. If you have any feedback, please send it my way.
