Whats your favorite SSMS time saving hotkey?

Recently I have been on the LEAN improvement quest to make a 2 second improvement in my process every day.

Part of that improvement is to avoid switching to the mouse when you don't have to. Here are some shortcut keys that I find very useful in SQL Server Management Studio, some of which I just discovered recently.

Window + L - Lock my Computer

F5 - My all time favorite - in a query window execute the query.

CTRL+M - Turn on/off Actual Execution Plan

CTRL-F6 switch between top tabs

F6 switch between tabs (ie Editor, Results, Messages…)

CTRL-TAB window manager

Alt+F1 for sp_help and a list of its fields

CTRL+SHIFT+U - shift word to uppercase

CTRL+SHIFT+L - shift word to lowercase

Ctrl+K+C - Comment block of text
Ctrl+K+U - UnCommnet block of text

What are your favorite keyboard shortcuts in SSMS?

Please post your favorites.
