TSQL 2012 - Generating letters with a SEQUENCE object

As shown in my previous posting on SEQUENCES, they are a user-defined object that generates a sequence of numeric values in Transact SQL 2012. But what if you want to generate letters instead of numbers.

Here is a code example of a sequence used to generate letters (indirectly).

Which generates the following output.

Just another cool trick with new features in sql server 2012.

For more info on sequences, take a look at my presentation for SQL Saturday 166 in Olympia WA.
