Beta 4 of the Database Health Reports

Just a reminder, we are a couple weeks into beta 4 of the database health reports. If you haven't tried it out, take a look at http://databasehealth.stevestedman.com.

You can use the Database Health Reports to increase the overall health of your SQL Server from finding duplicate indexes to tracking down wait stats on your SQL server. Beta 4 has been going well, and I would encourage you to give it a try for free.

Find out more and download it here.
