I Just Passed the Certified Scrum Professional Exam

Over the last month I have been studying in preparation for the Scrum Alliance Certified Scrum Professional exam which I just passed.

What I loved about preparing for he CSP exam was the amount of new material that I was exposed to. Things like Test Driven Development, Continuous Integration, Unit Testing, and much more. What a great experience.

Now it is time to figure out what is next, should I focus on the SQL Server 70-461 exam, or look at becoming a Scrum Trainer? Too many choices....
