Next Free SQL Query Training - OUTPUT Clause and Derived Tables

On Thursday Feb 19th at 9:00am pacific time, Aaron Buma and I will be doing another FREE SQL query training session.

This is a free training provided by Steve Stedman and Aaron Buma to prepare for the Microsoft 70-461 SQL Queries exam. This week we will cover OUTPUT Clause and Derived Tables. This is provided free of charge to give back to the SQL community.

- —OUTPUT Clause
- —Derived Table Queries (ie Subqueries)
    - —Correlated Sub Queries
    - —Sub Query Extensions (ANY, ALL, SOME)
    - —Exists

Here is the link to the Google On Air Broadcast for the session.

This will be about a 90 minute session Aaron Buma will present about half, and I will present the other half. After the live broadcast is over, the recorded session will be available on my YouTube channel for watching later.
