Speaking at PASS Summit 2016

This year in October, I again have the privilege to speak at PASS Summit in Seattle. One of my favorite topics, Database Corruption was the session that was selected.

Here are the details.

> **When Database Corruption Strikes**
>
> You database is running fine month after month with no problems. Suddenly someone reports that their query won't run. They get an error stating "SQL Server detected a logical consistency-based I/O error", or something even scarier. Do you know what to do now?
>
> We will walk through three corrupt databases exploring ways to go about finding and fixing the corruption. More importantly we will explore how to prevent further data loss at the time corruption occurs. Learn what things you can do to protect yourself when corruption strikes. Learn how to avoid making things worse, and how to protect your data if things do get worse. You will leave with a checklist of steps to use when you encounter corruption. By the end of this session you will be ready to take on corruption, one database at a time.

This is going to be a fun session to present.

If you are going to PASS Summit 2016, please check out my session.
