SQL Saturday Victoria Canada

We will be visiting SQL Saturday in Victoria Canada on March 16th. After the last SQL Saturday that I tried to attend was snowed out in Redmond a few weeks ago, I am ready for Victoria.

I will be presenting on Database Corruption, one of my favorite presentations. Here are the session details:

Basics of Database Corruption Repair

Duration: 60 minutes
Track: Admin
Level: Intermediate
Your database is running fine month after month with no problems. Suddenly someone reports that their query won't run. They get an error stating "SQL Server detected a logical consistency-based I/O error", or something even scarier. Do you know what to do now? We will walk through 3 corrupt databases exploring ways to go about finding and fixing the corruption. More importantly we will explore how to prevent further data loss at the time corruption occurs. Learn what things you can

do to protect yourself when corruption strikes. Learn how to avoid making things worse, and how to protect your data if things do get worse. You will leave with a checklist of steps to use when you encounter corruption. By the end of this session you will be ready to take on corruption, one database at a time.
Prerequisites: some basic DBA experience.

Looking forward to this trip, it should be fun and educational. There are many great speakers at this conference.
