Database Health Monitor May 2023 Release

Today I released version 1015 of Database Health Monitor. This is the May 2023 release of the product.

Here is a list of some of the features and updates in the latest release. You can download the latest version at http://DatabaseHealth.com/download2.

May 2023 – Version 1015 Release Notes

New Features

- QuickScan report, added an option to assign a Scan item to a user. If you assign item 52 to a user, then all item #52 on that instance get assigned to that user.
- Additional features for our Daily Checkup Customers being able to snooze items on the Daily Checkup Report from the Quickscan right click menu.
- Performance Monitor now starts tracking automatically when you open the application without needing to hit the start button.

Bug Fixes

- Fixed a case sensitive query issue on QuickScan Report.

Here is a big of an overview on the history behind Database Health Monitor.
