Excited to Release Training Videos

Just this week the team at Stedman Solutions finished the SQL Server JOIN Types paid training course. I am very excited to complete this and to make it available to the SQL Community.

Whether you have been writing SQL Queries for 10 years, or you are on connecting your first 2 tables in a query, there is something that you can get out of this class.

The SQL Joins class is a culmination of sessions that I have presented at SQL Saturdays, PASS Summit and local users group sessions over the last 6 years. I have taken the best content and built it into this new JOIN Types class. The class uses a training technique that I developed many years ago to represent the joining of data in queries using Venn diagrams. Now these are not a 100% literal use of Venn diagrams, but they are extremely handy for getting the point across on how data is being connected in the different ways.

We cover inner joins, left and right outer joins, full outer joins, outer joins with exclusion, cross joins, cross apply and outer apply and more!

I hope you will try it out, and to give you the incentive to try it out here is the link to the class and a promotional code to get the class for just $9.99 for a limited time.

That's a **65%** savings!!

Coupon Expires - Sept. 17th 2021 Midnight

Link to JOIN Types Course

Use Coupon Code at Checkout: JOIN-TYPES-RELEASE

Comes Complete with:

- Easy to understand lectures with examples

- Assignments

- Sample code to work with

- and free downloadable JOIN types poster

What you'll learn:

- How to effectively build queries based on those different relationships between tables.

- How the different types of joins will help you see the data you are looking for.

- How different the results are between the different join types.
