CTE to Find Dates in a Range

Here is a quick CTE that can be used to generate all the dates in a range.

```
DECLARE @startDate DATE = GETDATE() - 30; DECLARE @endDate DATE =
 GETDATE(); ; WITH datesCTE as ( SELECT @startDate as theDate UNION ALL
 SELECT dateadd(day, 1, theDate) as theDate FROM datesCTE WHERE theDate
```

This is handy to use when trying to find dates missing from a set, you can outer join to it, or union with it to fill in the blanks.
