The Availability of Common Table Expressions

Steve quickly touches on which versions of SQL Server common table expressions are available on.

Transcription of Video:

So common table expressions have been available since SQL Server 2005. And I really wish that I'd learned about common table expressions when they first came out. I think it was around 2010 2011 that I first learned about them. And I think in 2012 was the very first time I gave this presentation at a sequel Saturday event. Common table expressions are available on all versions of SQL Server from 2005 on including Azure SQL databases.
