SQL Short - Aggregation Class

Today I am pleased to announce that we have a new course available at Stedman SQL School. This is our second class in the SQL Short series, which is a set of short but focused courses to help improve your SQL query skill in specific areas.

The Aggregating Data in Your SQ?L Ser?ver course is a detailed course on how to use aggregation, grouping and windowing functions in your queries.

This course is on aggregation including windowing functions. With 7 different video presentations, sample code and homework assignments this is a great opportunity to learn about aggregating data in SQL Server and about using those aggregations with windowing functions.

This new course is available for just $5 as part of the SQL Short series.
