TSQL Output Clause course – just released

I have just completed a course in our SQL Queries series called TSQL Output Clause.

This is a short course, priced at a value for just $5.00.

Course Title

Using the TSQL Output Clause

Course Details

The SQL Server output clause is a great way to get data back from an insert, update or delete statement, and it cause be used for auditing, or tracking of changes. It is also a great way to capture changes for a type of undo mechanism if needed. One over the more overlooked SQL Server features that can help you write more effective queries.

This course is part of the Querying SQL Server series, and there will be more courses that go into this series in the near future.

Course Price

$5 one time fee
