TSQL Output Clause Class for $2

For just 2$ you can get my TSQL Output Clause class with coupon code OUTPUT2.

The SQL Server output clause is a great way to get data back from an insert, update or delete statement, and it cause be used for auditing, or tracking of changes. It is also a great way to capture changes for a type of undo mechanism if needed. One over the more overlooked SQL Server features that can help you write more effective queries.

Here is what a recent student had to say after completing the Output Clause Course:

> The Output Clause one was “new” knowledge for me as I never used/researched it…. I’m using it multiple times per day now.
>
> Greg (Course Student)

This course is part of the Querying SQL Server series and the SQL Shorts Series.

Here is the direct link to the class using the coupon code, valid through November 8th.
