Daily Server Monitoring - SQL Versions for April

Out of all of the customers we have running our daily monitoring here are the versions of SQL Server that are being run. All the data is sanitized, so there is no private client information to expose here. var xValues = ["SQL Server 2008R2","SQL Server 2012","SQL Server 2014","SQL Server 2016","SQL Server 2017","SQL Server 2019","SQL Server 2022",];var yValues = [1.6,6.8,3.0,13.6,16.3,49.3,9.3,];var barColors = ["#ea5545", "#f46a9b", "#ef9b20", "#edbf33", "#ede15b", "#bdcf32", "#87bc45", "#27aeef", "#b33dc6"];new Chart("myChart", { type: "doughnut", data: { labels: xValues, datasets: [{ backgroundColor: barColors, data: yValues }]}, options: { title: { display: true, text: "SQL Server Version Percent Distribution" } }});

What is this service?

With this service we detect and alert you of any issues that arise on your SQL Server. Then we send you details about this server issue and what it would take to resolve the issue.

What do you get with this service?

- Initial analysis with written details describing your current baseline issues.
- Daily or Weekly full email describing all recommendations.
- Monitoring several times each day on issues as they arise on your SQL Server.
- Daily notification on new issues with recommendations on how to resolve.
- Database Health Monitor license full license for all servers being monitored.
